

E-LEARNING COURSE

Introduction to Construction Estimating

Introduction to Construction Estimating will provide the knowledge and skills to visualize the scope and magnitude of a construction project and produce reliable estimates. This is accomplished by reviewing drawings through various phases of a project with the aim of determining the quantity and type of materials required for the project.

This course is intended for people working in estimating or any individual who wants to become an estimator in any part of the construction industry.

A final mark of 75% is required in order to receive 2 Gold Seal credits. Successful completion of this course will enable the student to:

- Know site-specific conditions and regulatory requirements
- Know how to handle the purchasing and logistics associated with materials on the job
- Know how to manage materials on site and be able to provide on site solutions relating to equipment and material placement
- Organize cost data in a clear and logical manner
- Have the ability to keep historical information related to costs, (including those associated with labour, material, overhead, equipment, availability of required items)
- Know how and when to update historical information related to costs
- Assemble bids and meet bid closure deadlines

This course is self-paced and is approximately 4 hours in length.
